

European Canker Programme 2011

EUROGEL

GREENSEAL™

ULTRA

Green tip	Normal Copper application at label rates.
Flowering	Prolific 1 - 2 applications at label rates - beware of residues.
After fruitset	Move onto Captan at 2 kg/hectare throughout the Summer period as cover sprays.
After picking each variety	Apply Eurogel at 5 litres/hectare with 2 kg/hectare Captan. (Foliar 1000 litres/hectare)
Leaf fall	Apply Eurogel at 5 litres/hectare with 2 kg/hectare Captan. (Foliar 1000 litres/hectare) Maximum time after pruning for covering secateurs/saw cuts is 3 days.
After pruning	Apply Eurogel at 5 litres/hectare with 2 kg/hectare Captan after pruning a block. (Foliar 1000 litres/hectare)
Pruning	Topical application on wounds - apply Eurogel neat from can through applicator.
Winter applications	Captan at 2 kg/hectare.
Continuous removal of cankers	Continuous scouring of the orchards for canker is necessary on a regular basis. Cankers found should be excised and a topical application of Greenseal Ultra™ applied to the wounds.
